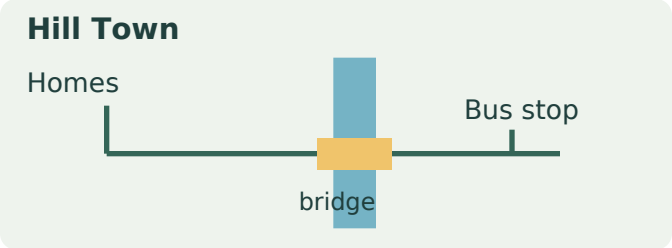
Same river. Different routes.

Name _____ Partner _____

Teaching sources: invented towns, map, survey and headlines. Not evidence about real countries. Talk, sketch or write; your question can change.



A. Route maps, not to scale. Lines are walking routes, not distances.

1. One detail I notice, and something I wonder

B. Same-day survey: "Can you reach a bus stop easily?" Hill Town: 8 of 20 said yes. River Town: 15 of 20 said yes. Each surveyed 20 residents.

2. One supported comparison, and one thing we cannot tell

C. Hill Town is considering a stop near the homes. Cost, demand and route effects are not checked. Headlines: "New stop could bring buses closer to homes" / "New stop could add costs to town's bus route."

3. Whose evidence would help us decide? Why?

4. My real-world question + one source I would need

Try: How do communities in ___ and ___ respond to ___, and who is affected?
