

A rule can welcome or block

Say, draw, point or write. Use the fictional situation; personal sharing is optional.

Start here

Fictional case: A group makes a game rule: "After every mistake, run the whole loop before rejoining." A player asks for a short walking return. The captain replies, "Everyone must do exactly the same thing." Another player offers to pull the first player along without asking. Nobody has to explain a body or health need. The shared goal is to practise passing and return to the game safely.

A worked example

Model: "Pulling someone without asking ignores a boundary. Ask first and accept no. We can offer a short walking or wheeling return and keep the same passing goal." This changes the participation rule without judging a player.

1. Point to one barrier and one boundary in the case.

2. Draw or describe one rule/route change that preserves passing practice.

3. Write one respectful instruction and explain how you would check whether the change helps.

A pause with a next step

Say, draw, point or write. Use the fictional situation; personal sharing is optional.

Start here

Fictional case: During a partner task, a student misses two passes, grips the ball tightly and says, "I cannot do this." A teammate wants to restart immediately. The student asks for a short pause in the agreed rest place. Choose a next step that protects the pause, gets useful support and leaves a way to return. The student need not explain personal feelings to the group. Strategy choices: pause in the agreed place; use a quiet count; look at one task cue; ask a trusted adult for help. No strategy must work for everyone.

A worked example

Model: "We can pause and put the ball down. The student could use a quiet count, look at the task card or ask the teacher for a cue. When ready, they could try a closer pass. A pause is a choice; it is not a punishment."

1. Name an observable clue, without guessing a diagnosis.

2. Make a three-step plan: pause, strategy/help, safe return or further help.

3. Add a backup if the first strategy or adult is unavailable.

Change one part of a plan

Say, draw, point or write. Use the fictional situation; personal sharing is optional.

Start here

Fictional case: A student plans an after-school movement break but a long outdoor route is unavailable today. They have ten minutes and a clear indoor space, with no equipment to buy. Options are a short walk/wheel route, seated reaching and tapping, or a four-move rhythm pattern. They want a plan they can pause and change. This is not a prescription for anyone's body.

A worked example

Model: "Keep ten minutes available, but change the type from an outdoor route to a seated rhythm pattern. Start gently and check whether to change, rest or ask for help." FITT means frequency/how often, intensity/how hard, time/how long and type/which activity. This example changes type, not all four at once.

1. Choose an activity for the fictional student and explain why it fits the available space/time.

2. Name one FITT change and add a private check-in plus rest/stop/help option.

3. Only five minutes remain: revise the plan and explain your choice.

Who made the claim? What supports it?

Say, draw, point or write. Use the fictional situation; personal sharing is optional.

Start here

Fictional ad: "NeonFocus Gear: Buy our PowerBand! Every wearer feels calm and gets better test scores after seven days. Our proof: 200 likes and one anonymous review. Post a face photo and a public daily energy score to join." The ad names no research study or qualified author. It is invented for this lesson. Source capsule - paraphrase of BC Women's Hospital + Health Centre (PHSA), 'Evaluating Online Health Info': Check who produced information, their qualifications, why it was made, when it was reviewed, and whether research can be checked. Begin with established health organizations, such as HealthLink BC. This guidance helps check a message; it does not establish whether NeonFocus works. Source: <https://www.bcwomens.ca/health-info/staying-healthy/navigating-the-health-system/evaluating-online-health-info>

A worked example

Model: "The seller made the claim and may benefit from a sale. Likes show attention, not evidence for every wearer. The source capsule tells me what to check; it does not prove the PowerBand works or fails. I would pause, avoid posting private information and ask a trusted adult to help check."

1. Identify the ad's creator, purpose and exact claim.

2. Separate the offered proof from one missing piece of checkable evidence.

3. Explain what the PHSA capsule helps you check and what it does not prove.

4. Write a privacy-safe next step without buying, posting private details or testing the product.

Question the message, not a body

Say, draw, point or write. Use the fictional situation; personal sharing is optional.

Start here

Fictional case: A made-up sportswear post labels a filtered image "the only athletic look" and asks viewers to rate bodies. Its small print says the picture was edited and the poster sells clothing. In a group chat, someone repeats the rating idea. You can question the message and set a boundary without rating yourself or anyone else. Media-literacy background: MediaSmarts explains that media are constructed and can have commercial purposes; its body-image guidance supports respectful critical discussion.

A worked example

Model: "The image is edited and promotes clothing. It cannot tell us a person's health, worth or whole ability. I would say, 'Let's discuss the message, not rate bodies.' If targeting continues, ask a trusted adult for help."

1. Which details show that the post was constructed for a purpose?

2. Write two things the image cannot establish about a person.

3. Replace the body-rating invitation with two respectful lines.

4. Choose a boundary/help response if the group keeps targeting someone.

A help path that does not stop too soon

Say, draw, point or write. Use the fictional situation; personal sharing is optional.

Start here

Fictional case A: An unknown account offers a place on a sports team but asks a student to send a face photo, a home address and private health details. It says, "Keep this secret and meet us alone."
Case B: During school practice, a student is hurt and the area is unsafe. Choose one case. Use roles, not classmates' names. Available school routes must be confirmed by the teacher: classroom teacher, supervising adult or school office; a second available responsible adult is the backup.

A worked example

Model for case A: "Do not reply, send details or go to the meeting. Move away from the message and tell an available trusted adult privately. If the first adult is unavailable or does not act, seek another responsible adult. An adult decides the next protection steps. If there is immediate danger, use emergency help now rather than wait to gather evidence."

1. Choose case A or B. What is the immediate protection action?

2. Name an appropriate school adult/role and the confirmed place to find help.

3. Add a short help sentence and a backup route if the first helper is unavailable.

4. Explain what changes if there is immediate danger.
