

Three shared response stations

Start here: Open Earth's existing change cards. Use Canada microbeads, Surrey green infrastructure, and climate loss-and-damage funding as the shared environmental set.

Same questions at every station

Who acts? What changes? What evidence exists? Who helps decide? What result is not yet established?

Keep the issues distinct

These address different environmental problems. Compare mechanisms and evidence stages; do not rank them as if they solve the same problem.

Pressure cards

Funding is cut; a group cannot access the response; implementation is delayed; monitoring shows no improvement. Choose one, then name what you would need to check.

Team scope

Study three shared cards, but compare only two responses in your final product. Teams with another inquiry can reuse their existing source trail with teacher approval.

Open the existing Earth source cards and their print view · Select just the named cards. Their source dates and limitations travel with them.

Our thinking · name / team: _____

Response A / response B / evidence of action / evidence of effect / limit / what we would keep, adapt or question.

A sensible prediction is not a measured result. No new SpacesEDU post.
