

Product chain and resource decision

Start here: Use the existing T-shirt model in Earth, Stuff & Fairness or the supplied backpack screen. Both are simplified models, not a traced brand.

Product path

Cotton/resources → fabric and sewing → transport/shop → use/repair → reuse or disposal. Add one decision-maker and question at each step.

Shock cards

Shipping is delayed two weeks. Repair parts become unavailable. A purchasing rule now requires pay records. Choose one; trace three possible effects, not guaranteed results.

Redesign cards

Offer repair parts; change a supplier contract; add worker negotiation; change public purchasing. Choose two, name who can act, and explain a cost or limit.

Cedar LNG · a B.C. decision in March 2023

Read A and B. Mark a shared fact, a different emphasis, and a result neither source proves.

A · Haisla-majority-owned project partnership · 14 March 2023

The Haisla Nation and Pembina announced provincial approval for a proposed floating natural-gas export facility on Haisla-owned land in Kitimat. Haisla leadership connected the project to economic self-determination. The partners described expected jobs and environmental benefits. These are their aims and claims, not measured outcomes.

[Read the joint announcement and attributed Haisla statement](#)

B · B.C. public decision · 14 March 2023

The Province reported issuing an environmental assessment certificate with 16 enforceable conditions. Requirements included emissions planning, community complaints, marine-use communication with First Nations, and hiring and housing plans. Approval with conditions does not prove there will be no harm.

[Read the provincial decision](#)

Your case card: Who owns and decides? What benefit is claimed? Which condition addresses a possible cost? What later evidence would show whether it worked?

Keep the limit: This is a historical decision snapshot, not the project's current status. Haisla is a specific Nation and government, not a voice for all Indigenous Peoples. The joint project source has a financial interest; the approval source is not independent proof of results. Do not role-play a Nation or infer unanimous consent.

[Open the existing Earth source cards and their print view](#) · Select just the named cards. Their source dates and limitations travel with them.

Our thinking · name / team: _____

Product → three possible ripple effects → one rule change → who decides → a trade-off.

For Cedar LNG, compare the supplied dated source pair. An approval, a prediction and a measured result are different kinds of evidence.
