

Access companions: choose the support

Use with the existing maths readiness routes and six-week PHE sequence. Select a small number of pages for the current lesson; completion of the whole pack is not expected.

What these companions add

These pages reuse earlier bilingual speaking supports and foundational number practice in new lesson contexts. They provide complete examples, simpler directions, visual representations and oral or pointing routes. Earlier resources remain useful; these companions do not replace them.

Choose language support and maths support separately

A learner who is new to English may understand the full maths idea. Offer translated directions, unit words, pointing, drawing or an oral response before inferring a number difficulty. Choose foundational quantity/counting/tens-and-ones pages only when that is the useful mathematical goal.

Foundational pages have different goals from Grade 6 decimal comparison. Showing more/fewer, counting a set or representing two-digit numbers does not demonstrate equivalent Grade 6 content mastery. Keep each learner in the shared block with a meaningful, appropriate goal.

Keep access support distinct from giving an answer

Read or translate the direction, clarify vocabulary, enlarge a diagram or supply tactile objects. During an independent check, avoid naming the deciding place, counting the group for the learner or supplying the comparison sign. Record the kind of help that made participation possible; these pages create no formal scores or reporting checklist.

The dot and ten-frame diagrams intentionally do not name the counts in their accessible labels. For a learner who cannot access the visual, provide the same arrangement using tactile counters or another suitable representation that they can inspect and count independently.

PHE and speaking participation

Use fictional cases, offer a private response or a pass on public sharing, and confirm actual school help routes. The PHE cards support choices and explanations; they do not replace physical practice or supervision. Offer purposeful movement separately where a task asks for movement evidence. Practise Korean-English frames as flexible invitations, not required scripts or tests of accent.

Print-page map

Numbers below refer to the PDF printed page numbers. The HTML companions present the same student inputs as readable text. Teacher keys are kept in this guide.

Maths visual companions

Pages 1-2: Keep the whole the same

Pages 3: Point to the place that decides

Pages 4-5: Show your reason with fresh numbers

Pages 6: Match the two collections

Pages 7-8: More, fewer or the same?

Pages 9-10: Groups of ten and loose ones

Pages 11-12: Show what changes

PHE visual companions

Pages 1: A way back into the game

Pages 2: Pause, choose, get support

Pages 3: Change one part of a plan

Pages 4: A claim needs evidence

Pages 5: Question the message; respect people

Pages 6: A help path with a backup

Pages 7: Ready, send, receive, reset

Pages 8-9: Choose one change, then replay

English-Korean speaking companions

Pages 1: Which place decides?

Pages 2: Same value, clearer explanation

Pages 3: Ask first. Leave room for a pause.

Pages 4: Change the plan. Respect the person.

Pages 5: What supports the claim?

Pages 6: Protect and get help

Pages 7: Ready, stop, try again

Maths visual companions | teacher guidance and keys

Keep the whole the same | student pages 1-2

Use when: Use when a learner working on decimal comparison needs the unit relationship made visible or an oral way to explain it. English proficiency alone does not imply a need for smaller whole numbers.

Learning goal / connection: Keeps the place-value and equivalence goals in the existing represent-reteach route. This is visual access to that mathematics, not a separate lower-number assignment.

Look for: The learner identifies an equal whole, relates tenths to hundredths, and supports a comparison or equality. Counting shaded cells is valid, but ask what the counted unit represents.

Render every grid at exactly the same size with 10 rows and 10 columns. Each shaded cell is one hundredth; shade whole rows first so one full row also shows a tenth. Use black-and-white distinguishable shading, not colour alone.

Read a prompt and name the symbols if needed: less than, greater than, equal to. Do not supply the task's deciding relationship. An adult can record a learner's spoken words or indicate cells as directed.

The worked model is deliberately complete. Task answers belong only in the teacher key. These companion examples differ from the existing readiness check; use the fresh companion check later to see how the idea transfers.

Do not infer mastery from two correct symbols. Ask the learner to explain with the grids, then use a fresh example. The existing Korean-language material can remain an optional language support; these diagrams add a different access route.

Task responses / possible explanations

1. $0.6 = 0.60$. Each grid has 60 of the same-sized 100 parts shaded. Six tenths is sixty hundredths; the final zero does not change the value.

2. $0.08 < 0.8$. Eight hundredths is less than eighty hundredths; 0.8 is eight tenths. The second shaded amount is greater.

Point to the place that decides | student pages 3

Use when: Use when the learner understands the quantities but needs an aligned display, processing time or a short language frame to communicate a comparison.

Learning goal / connection: Supports the existing compare-consolidate route and its whole-number/thousandths comparison goal. No extra rounding or number-line lesson is required.

Look for: The learner attends to place value rather than the largest isolated digit or the number of written digits. A pointing response must identify the relevant place, not just a preferred symbol.

Keep complete numbers as strings so trailing zeros remain visible. Column headings must stay aligned with their digits and be large enough to read.

Provide the unit words orally or in a familiar language as needed. Treat difficulty saying 'hundredths' separately from an accurate gesture and mathematical explanation.

These tables already align the digits; do not describe success here as evidence that a learner can independently construct the chart. It is evidence about comparing using that support.

Let a partner listen after an initial attempt. For the fresh check, use the learner's usual access supports without a partner supplying the comparison.

Task responses / possible explanations

1. $5.208 < 5.28$. Ones and tenths match; hundredths first differ: $0 < 8$. Writing 5.28 as 5.280 aligns equivalent places without changing its value.
2. $3,460 > 3,406$. Thousands and hundreds match; tens first differ: $6 > 0$. The later 6 ones in the second number do not outweigh the tens difference.

Show your reason with fresh numbers | student pages 4-5

Use when: Use after the matching visual or oral lesson, choosing only the items that check the intended goal. The check is not a placement score.

Learning goal / connection: Fresh supported evidence for the existing represent-reteach and compare-consolidate pathways. The model gives a response structure and no numerical answer to these tasks.

Look for: A reason based on the place values or equal units, with the supports actually used. Notice a specific idea that has become clearer and any idea still needing a different representation.

Do not reveal this page's answers while the learner is deciding. A scribe can record exactly what the learner directs; a partner should not choose a symbol or place for them.

The three decisions do not generate a cutoff or a fixed ability group. If a reason is unclear, ask 'Show me what you mean' before changing the task.

If the unit relationship is uncertain, return to equal-whole grids. If units are clear but the order of comparison is uncertain, return to the deciding-place model. An oral explanation is sufficient evidence when writing is not the learning goal.

Completion of this page does not establish readiness for multiplication. Keep the separate multiplication mini-check in maths-readiness-pathways.json separate.

Task responses / possible explanations

1. $0.407 < 0.47$. Ones and tenths match; hundredths first differ: $0 < 7$.
2. $1.8 = 1.80$. Both have 1 whole and 8 tenths, or 1 whole and 80 hundredths. The final zero does not change the value.
3. $7,690 > 7,609$. Thousands and hundreds match; tens first differ: $9 > 0$.

Match the two collections | student pages 6

Use when: Choose this page when observed counting or matching shows that quantity comparison within 10 is an appropriate current learning goal. It is not selected merely because a learner is learning English.

Learning goal / connection: This is a different, foundational quantity goal from the Grade 6 decimal-comparison goal. It provides meaningful participation in comparing and explaining while preserving that distinction.

Look for: Matches one to one or counts each object once, connects the final count to the collection, and compares amounts rather than the length of a row or the space occupied.

Use same-sized dots and clearly label Left and Right. Do not print the task counts beneath the pictures; the quantities are the starting evidence. Keep spacing sufficient for pointing and matching.

The worked model names its amounts and gives its conclusion; the practice collections use different inputs. Accept a complete matching demonstration without requiring spoken number words or comparison symbols.

If drawing or touching is difficult, provide movable counters or move them as the learner directs. Do not treat a motor or language barrier as a quantity error.

Numeral recognition up to 40 does not establish counting, comparison or arithmetic within that range. Work from the learner's actual demonstration. Use the fresh comparison page after this model and practice if useful.

Task responses / possible explanations

1. Right has more: 7 dots compared with 4. One-to-one matching makes 4 pairs with 3 right dots unmatched.
2. Left has more: 8 dots compared with 6. Matching makes 6 pairs with 2 left dots unmatched.

More, fewer or the same? | student pages 7-8

Use when: Use for fresh evidence after practising one-to-one quantity comparison. Introduce the equality model first if 'same amount' is new; the later equal pair is a new input.

Learning goal / connection: Continues the foundational quantity goal chosen by the teacher. It does not replace or claim achievement of the class's Grade 6 decimal goal.

Look for: A matching or counting strategy that supports more, fewer or same. Distinguish a misunderstanding of the word 'fewer' from a comparison error.

Use the worked 2-and-2 example only as a model. Task quantities 5-and-9, 10-and-7 and 6-and-6 are not demonstrated in advance.

The second prompt deliberately asks for fewer. Read or paraphrase that word if needed without identifying the side. A learner can show the smaller collection without saying its name.

Leave the learner's usual pointing, counter or scribe support available. Do not total the choices into a mastery cutoff or compare learners publicly.

If the learner compares picture size rather than amount, rearrange the same objects together and match them again. Choose a next representation from that evidence; do not automatically increase the number range.

Task responses / possible explanations

1. Right has more: 9 compared with 5. Five pairs leave 4 right dots unmatched.
2. Right has fewer: 7 compared with 10. Seven pairs leave 3 left dots unmatched. The question asks for fewer, not more.
3. Same amount: 6 on each side. Six pairs use every dot, with none unmatched.

Groups of ten and loose ones | student pages 9-10

Use when: Offer when the learner can work with small quantities and a brief demonstration suggests grouped tens would be meaningful. Familiarity with numerals to 40 alone is not sufficient evidence.

Learning goal / connection: An optional foundational place-value representation goal. It does not presume addition or subtraction to 40, regrouping, decimal understanding or independent success with earlier optional arithmetic examples.

Look for: Treats each rod as ten ones, counts rods as tens and loose units as ones, and explains the zero ones in 40.

Every rod must visibly contain ten equal unit squares; make loose ones the same unit size. Keep tens and ones in distinguishable spaces without using colour as the only cue.

Do not label the practice pictures with their total before the learner interprets them. The visual values are renderer instructions, not student answer labels.

If grouping ten is not yet meaningful, stay with collections within 10. Do not introduce two-digit arithmetic because the learner recognizes the numeral 40.

The final 40 task is fresh. Ask the learner to explain or point to the empty ones space; an accurate number name alone gives less evidence than the representation.

Task responses / possible explanations

1. 3 tens and 1 one represent 31.
2. The second collection, 32, is greater than 24. Three tens is greater than two tens; four loose ones do not make up another whole ten. Thus $24 < 32$.
3. 4 tens, 0 ones, number 40. The empty ones space means zero loose ones, not a missing ten.

Show what changes | student pages 11-12

Use when: Use only when observed counting and handling of quantities within 10 suggest joining/removing is an appropriate current goal. Check that the learner can distinguish the two actions before independent practice.

Learning goal / connection: Optional foundational arithmetic within 10. It is a different learning goal from the class's decimal comparison and from numeral recognition or tens-and-ones representation to 40.

Look for: Tracks the starting amount and the change, joins or removes the stated number, and identifies the resulting amount. A spoken equation is optional when the objects show the reasoning.

Ten-frames have two rows of five cells. Practice and fresh-check frames show only starting dots; leave other cells empty so the learner can make the change. Do not prefill a task's resulting total.

The worked model shows two outlined added dots after the four starting dots in the first frame, and three crossed removed dots among the six starting dots in the second. Read the legend aloud and demonstrate the same changes with counters if useful.

For an oral or motor-access route, move counters or make marks exactly as the learner directs. Check mathematical intent without requiring handwriting or rapid counting.

The two fresh tasks use new inputs and results not given by the worked model. Review the joining and removing evidence separately; one correct action does not establish the other.

Do not advance to operations beyond 10 from this page alone. Earlier optional $23 + 4$ or $28 - 3$ examples, or recognition of numerals to 40, are not evidence of independently understood arithmetic in that range.

Task responses / possible explanations

1. $2 + 5 = 7$. Add five dots to the two starting dots; seven objects are present altogether.
2. $9 - 4 = 5$. Cross out or remove exactly four starting dots; five remain.
3. $3 + 5 = 8$. Five joined objects and the three starting objects make eight.

4. $8 - 1 = 7$. Removing one from eight leaves seven.

PHE visual companions | teacher guidance and keys

A way back into the game | student pages 1

Use when: Use with Week 1 health, Boundaries and a way back in; offer alongside the original student page.

Learning goal / connection: Same goal as w1-health: identify a participation barrier, respect consent and propose a practical change without losing the passing goal.

Look for: A case detail, an accepted boundary, a workable redesign and a useful check. Accept supported alternatives; choice cards are starting points, not a single-answer test.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Read the supplied case/model aloud and offer pointing, speech, drawing, dictation, home language or AAC. No personal access explanation is required.

Do not role-play unwanted contact or simulate disability. A learner may pass on public sharing.

Keep task.answer in the teacher guide only. This page supports reasoning; it is not physical-skill evidence.

Task responses / possible explanations

1. The compulsory long return or unasked pulling can block participation. Ask before touching and accept the response.
2. Accept a feasible change linked to the barrier. The player still has useful passing turns.
3. Player feedback and a no-name observation can support a decision; touches alone do not prove inclusion.

Pause, choose, get support | student pages 2

Use when: Use with Week 2 health, Pause, choose a strategy, ask for help.

Learning goal / connection: Same w2-health reasoning: notice a cue, protect a pause, choose a strategy/help route and retain a backup.

Look for: A feasible plan with choice and support. Pointing to action cards plus an oral explanation is sufficient; a polished personal story is not needed.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Confirm actual available school adults and where to find them before the lesson. Keep this fictional; do not collect emotional histories.

The four original strategy choices are supplied on the page. Read them aloud; let learners choose or propose another safe strategy.

This is strategy practice, not diagnosis or a promise that counting resolves distress. Real concerns use school procedures.

Task responses / possible explanations

1. The words, grip or pause request are observable. Respect the pause; do not diagnose the player.
2. Several safe plans fit. Connect the choice to the case; no strategy has to work for everyone.
3. Seek another available responsible adult. Do not pressure an immediate return or leave the learner without support.

Change one part of a plan | student pages 3

Use when: Use with Week 3 health, A realistic choice for today.

Learning goal / connection: Same w3-health goal: connect one FITT change to a real constraint, include a private check-in, then adapt to a changed day.

Look for: Accurate FITT language and a realistic plan with choice. Different activities can be equally defensible.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

This page reasons about a fictional plan. Completing it does not demonstrate physical activity.

No body measures, effort scores, home activity reports or family equipment purchases are required.

Demonstrate unfamiliar words or movements only within an appropriate teacher-approved space and support plan.

Task responses / possible explanations

1. Accept a feasible activity suited to the space/time. No route or body is ranked.
2. Connect a change to the constraint and include an adjustable check-in. A personal effort number is unnecessary.
3. A shorter duration or another feasible activity can fit. Explain the change rather than prescribe a fitness target.

A claim needs evidence | student pages 4

Use when: Use with Week 4 health, A confident claim is not enough.

Learning goal / connection: Same w4-health thinking: source/purpose, claim/evidence, missing information, source limits and a privacy-safe response. Both student inputs are supplied offline.

Look for: A distinction between a seller's claim, attention or anecdote, and relevant checkable evidence. Commercial purpose invites scrutiny; it is not automatic disproof.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Authentic capsule is a short paraphrase, not a fabricated study: BC Women's Hospital + Health Centre (PHSA), Evaluating Online Health Info: <https://www.bcwomens.ca/health-info/staying-healthy/navigating-the-health-system/evaluating-online-health-info>

Canadian Paediatric Society background for source/privacy checks: https://caringforkids.cps.ca/handouts/behavior-and-development/health_information_on_the_internet

Read the ad and capsule separately and label the ad fictional. No purchase, health disclosure, product experiment or internet access is required.

Keep answer text in teacher materials only; the different shoe example models a check without answering the full PowerBand task.

Task responses / possible explanations

1. NeonFocus sells it; calmness/scores are claims. Likes/review are not checkable research. Relevant evidence is missing.
2. It guides source checks. It does not establish whether PowerBand works or fails.
3. Pause and seek reliable adult-supported information; do not post the requested photo or personal score.

Question the message; respect people | student pages 5

Use when: Use with Week 5 health, Respect bodies; question the message.

Learning goal / connection: Same w5-health reasoning: notice constructed/commercial media, distinguish claims from what an image can establish, and use a respectful boundary/help route.

Look for: A critical message response and practical wording. Do not confuse supportive agreement with evidence; learners can explain different defensible choices.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Background: MediaSmarts, Talking to Kids about Media and Body Image:

<https://mediasmarts.ca/teacher-resources/talking-kids-about-media-body-image-tip-sheet>

Do not display or rate student bodies, ask for appearance concerns, or role-play insults. Use the supplied fictional description.

This is partial media/identity work, not complete puberty teaching. Personal concerns go privately through school support procedures.

Task responses / possible explanations

1. Sale/editing are supplied facts. The image cannot establish health or worth; do not rate anyone.
2. Accept respectful wording that welcomes different participation routes without ranking bodies or appearance.
3. Several safe responses fit. Include adult support if targeting continues; the targeted person is not to blame.

A help path with a backup | student pages 6

Use when: Use with Week 6 health, Protect first, get help, follow up.

Learning goal / connection: Same w6-health goal: immediate protection, appropriate adult/location, backup and urgency. The model uses the other original low-detail case so the learner transfers the reasoning.

Look for: Safety before investigation or evidence collection; responsibility placed with adults; a reachable backup. No personal disclosure is needed.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Before use, confirm actual school help roles/locations and the emergency route. Learners may point while the teacher records a role, never a classmate's private details.

Do not ask learners to confront an account, stage an emergency or gather risky evidence. They may use a different low-detail case or pass on public sharing.

Official support background: <https://kidshelpphone.ca/> . For immediate danger use school emergency procedures or 911; non-emergency private support does not replace emergency help.

Task responses / possible explanations

1. Avoid replying, sharing or meeting; seek adult support. Several protection actions can work together.
2. Use an available adult/location, a brief request such as "I need help with a message", and another adult if needed.
3. Use adult/emergency help now, following school procedures. Do not delay for proof or a perfect explanation.

Ready, send, receive, reset | student pages 7

Use when: Reuse in the six-week PE sequence, especially Weeks 1-2 passing and Weeks 4-6 light-ball practice.

Learning goal / connection: Same physical and strategic goals: controlled sending/receiving, ready signals, safe pauses and evidence-based adjustment. This cue page does not introduce new technique or replace lesson rules.

Look for: Physical control through a suitable movement route plus a reasoned cue/adjustment. Strategy explanations and physical demonstrations are separate evidence.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Teacher chooses the already-taught activity, equipment, clear lanes and stop signal. Keep the original no-contact, retrieval and supervision rules.

Offer purposeful seated/standing/wheeling movement, distance/ball adaptations and rest/return. No family equipment purchase is required.

A temporary observer can complete the planning/explanation. This does not demonstrate the physical skill; agree a suitable movement opportunity separately.

Do not require body data, comparison scores, a photograph or video.

Teach the shared cues aloud: Stop means follow the existing freeze signal and secure equipment safely; Pause requests rest and a chosen return; Help signals the teacher. Rehearse without turning a request into a public disclosure.

Task responses / possible explanations

1. Choose a change that could improve control. The ready signal alone does not solve every distance or force problem.
2. Observe the actual taught skill. Catch/send is a useful bridge but is not a forearm-pass demonstration.
3. Connect an observed difference to the adjustment; use the established safe stop/help routine.

Choose one change, then replay | student pages 8-9

Use when: Use during PE1 captain preparation or PE2 familiar practice in any of the six weeks.

Learning goal / connection: Same everyone-in-game/strategy-remix thinking: notice a pattern, test one approved change, communicate and decide from evidence. Use the supplied gate case for planning or an actual familiar replay when feasible.

Look for: Specific instructions, a reasonable prediction and a decision grounded in group evidence plus feedback. More touches alone do not establish choice or enjoyment.

Read the case, model and each choice aloud once while pointing; reread on request. Keep cards visible for pointing, speech or AAC. These are word cards with oral support, not independent pictorial access. Pause/help cues are the same across pages.

Teacher approves equipment, space, rules and access, remains supervising and manages safety decisions. Rotate leadership jobs without removing movement turns.

Paper planning shows strategy/communication. An observer or captain explanation does not itself demonstrate physical performance; preserve a suitable movement route and assess it separately.

Use no-name observations only. No fitness rankings, body disclosures or public performance record is required.

The choice cards are response starters, not pre-approved rules for every space.

Teach the shared cues aloud: Stop means follow the existing freeze signal and secure equipment safely; Pause requests rest and a chosen return; Help signals the teacher. Rehearse without turning a request into a public disclosure.

Task responses / possible explanations

1. Accept a feasible change tied to crowding or waiting; preserve purposeful movement, choice and safety.
2. Instructions must match the familiar teacher-approved rules. Captains do not remove support routes or invent safety rules.
3. Several decisions can fit the evidence. Check safety, useful turns and choice; do not rank players.

English-Korean speaking companions | teacher guidance and keys

Which place decides? | student pages 1

Use when: Use after the comparison model, not during an independent readiness check.
비교 방법을 가르친 뒤 사용해요. 독립적인 준비도 확인 중에는 사용하지 않아요.

Learning goal / connection: Maths compare-consolidate: first unequal place and explaining reasoning. New practice numbers; this is a dialogue companion, not a repeat of the earlier basic worksheet.

수학 compare-consolidate: 처음으로 다른 자리와 비교 이유 설명. 새 수를 사용하는 대화 자료이며, 이전 기초 학습지의 반복이 아니에요.

Look for: Separates a correct result from a complete place-value explanation.
맞는 결과와 충분한 자릿값 설명을 구별하는지 살펴봐요.

Korean supports expression; do not infer mathematical ability from English fluency or require public speech.

한국어는 표현을 돕는 도구예요. 영어 유창성으로 수학 능력을 판단하거나 공개 발표를 요구하지 않아요.

Let a learner point to named columns, dictate, or write both dialogue turns. No multiplication gate content is included.

자리 이름이 있는 표를 가리키거나, 말로 답하거나, 두 사람의 대화를 모두 써도 돼요. 곱셈 준비도 문항은 포함하지 않았어요.

Task responses / possible explanations

1. $8.041 < 8.140$; tenths first differ, $0 < 1$. Accept any clear question and place-value explanation. $8.041 < 8.140$ 이에요. 소수 첫째 자리에서 처음 달라져요. $0 < 1$ 이에요. 질문과 자릿값 설명이 분명하면 표현은 달라도 돼요.

2. The comparison is correct. Ten-thousands, thousands and hundreds match; tens first differ, $7 \text{ tens} > 0 \text{ tens}$.

비교 결과는 맞아요. 만의 자리, 천의 자리, 백의 자리는 같고, 십의 자리에서 처음 달라져요. 십의 자리의 숫자 7이 0보다 커요.

Same value, clearer explanation | student pages 2

Use when: After teaching equivalence; offer the boundary task when the comparison ideas are secure.

같은 값의 표현을 가르친 뒤 사용해요. 비교 개념이 안정되면 범위 문항을 제시해요.

Learning goal / connection: Represent-reteach and deepen-apply: equivalent decimal units, included lower bound and excluded upper bound.

Represent-reteach와 deepen-apply: 같은 값의 소수 표현, 포함되는 아래쪽 경계값과 제외되는 위쪽 경계값.

Look for: Explains units and the meaning of at least/less than; language support does not reduce the reasoning demand.

단위와 ‘이상·미만’의 뜻을 설명하는지 살펴봐요. 언어 지원을 하더라도 추론 수준은 낮추지 않아요.

These lengths are invented. No measuring equipment, public speaking or multiplication check is required.

길이는 가상의 값이에요. 측정 도구, 공개 발표, 곱셈 준비도 확인은 필요하지 않아요.

Use one task at a time. A labelled drawing, Korean explanation or dictated dialogue can show the same mathematics.

한 번에 한 문항씩 사용해요. 이름을 붙인 그림, 한국어 설명, 받아쓴 대화로도 같은 수학적 이해를 보여 줄 수 있어요.

Task responses / possible explanations

1. Both are 1 whole plus 23 hundredths, or 1 whole plus 230 thousandths. A reply should preserve that equivalence.

둘 다 1에 0.01을 23개 더한 값이며, 1에 0.001을 230개 더한 값과 같아요. 확인하는 말에서도 이 관계가 유지되어야 해요.

2. 0.860 m and 0.86 m qualify; they equal the included minimum. 0.859 m is below it. Both selected lengths are less than 0.900 m.

0.860 m와 0.86 m가 해당해요. 포함되는 최솟값과 같아요. 0.859 m는 그보다 작아요. 고른 두 길이는 모두 0.900 m보다 작아요.

Ask first. Leave room for a pause. | student pages 3

Use when: Alongside Weeks 1-2 health; use one fictional case at a time.

1-2주차 건강 수업에서 가상 사례를 하나씩 사용해요.

Learning goal / connection: Boundaries, respectful participation, reset choices and nonurgent help-seeking.

상대의 의사 존중, 존중하는 참여, 진정과 재참여 방법, 긴급하지 않은 도움 요청.

Look for: Keeps the shared passing goal while accepting refusal, pause and an adult backup.

패스 목표를 유지하면서 거절과 휴식을 존중하고 다른 어른에게 도움을 구할 수 있는지 살펴봐요.

Confirm actual rest and help locations. Do not rehearse pulling, unwanted touch, or personal disclosures.

실제 휴식 장소와 도움을 구할 곳을 확인해요. 끌기, 원하지 않는 접촉, 개인 경험 공개를 연습시키지 않아요.

A strategy is a choice, not a promise to resolve distress. Allow a different case or a pass on public sharing.

방법은 선택이지 어려운 감정을 반드시 해결한다는 약속이 아니에요. 다른 사례를 고르거나 공개 나눔을 건너뛸 수 있어요.

Task responses / possible explanations

1. Example: 'Choose a short walking or wheeling return. Ask before helping; accept no.' Preserve passing practice without requiring an explanation of a need.

예: '짧게 걸거나 휠체어로 이동해서 돌아와도 돼요. 도와주기 전에 묻고, 거절하면 존중해요.' 이유를 밝히라고 요구하지 않으면서 패스 연습을 유지해요.

2. Protect the pause, offer a chosen strategy, and allow return when ready or further help. Name another available trusted adult if needed; never force immediate return.

실 시간을 존중하고 방법을 고르게 해요. 준비되면 돌아오거나 도움을 더 구할 수 있어요. 필요하면 다른 믿을 만한 어른을 찾아요. 즉시 복귀하도록 강요하지 않아요.

Change the plan. Respect the person. | student pages 4

Use when: Use Task 1 in Week 3 and Task 2 in Week 5; the page need not be completed in one sitting.

1번은 3주차에, 2번은 5주차에 사용해요. 한 번에 모두 끝낼 필요는 없어요.

Learning goal / connection: FITT time/type and body-respect media reasoning. Other FITT definitions remain in the core lesson; this is not complete identity or puberty teaching.

FITT의 시간·종류와 몸을 존중하는 미디어 읽기. 나머지 FITT 정의는 본 수업에서 다뤄요. 정체성이나 사춘기 교육 전체를 대신하지 않아요.

Look for: Connects a changed constraint to a plan and separates an edited image from evidence about a person.

조건의 변화에 맞게 계획을 바꾸고, 편집된 사진과 사람에 관한 근거를 구별하는지 살펴봐요.

No personal exercise habits, body measurements, photographs or health disclosures are requested. 개인의 운동 습관, 신체 치수, 사진, 건강 정보는 요구하지 않아요.

If the fictional chat continues targeting someone, a trusted-adult help route is appropriate. Use the core Week 5 source notes for MediaSmarts background.

가상 대화에서 특정인을 계속 괴롭힌다면 믿을 만한 어른에게 도움을 구해요. MediaSmarts 배경 자료는 본 수업 5주차 출처 안내를 사용해요.

Task responses / possible explanations

1. Time changes from ten to five minutes. Accept a suitable activity plus flexible rest/stop/adult help; no effort target is required.

시간이 10분에서 5분으로 바뀌어요. 알맞은 활동과 함께 쉬기, 멈추기, 어른에게 도움 구하기를 제안해요. 운동 강도 목표를 정할 필요는 없어요.

2. Example: 'People can participate in varied ways. Let's discuss the message, not rate bodies.' The image cannot establish health, worth or whole ability.

예: ‘참여하는 방법은 다양해요. 몸을 평가하지 말고 메시지를 살펴봐요.’ 사진만으로 건강, 사람의 가치, 전반적인 능력을 판단할 수 없어요.

What supports the claim? | student pages 5

Use when: Alongside the Week 4 claim/source lesson; the supplied capsule works offline.

4주차 주장·출처 수업과 함께 사용해요. 제시된 요약만으로 오프라인 활동이 가능해요.

Learning goal / connection: Health-message intention, claim/evidence distinction and privacy-safe decisions.

건강 메시지의 의도, 주장과 근거의 구별, 개인정보를 보호하는 판단.

Look for: Names the claim accurately and limits what the source establishes.

주장을 정확히 말하고 출처가 뒷받침하는 범위를 지키는지 살펴봐요.

Source for the paraphrase: BC Women's Hospital + Health Centre (PHSA), Evaluating Online Health Info, <https://www.bcwomens.ca/health-info/staying-healthy/navigating-the-health-system/evaluating-online-health-info>

요약 출처: BC 여성병원·건강센터(PHSA)의 온라인 건강 정보 평가 안내. 위 주소에서 원문을 확인할 수 있어요.

A sales purpose calls for scrutiny; it does not automatically make a claim false. Do not invent a study or ask for personal health data.

판매 목적이 있으면 꼼꼼히 살펴봐야 하지만, 그 자체로 주장이 거짓이 되는 것은 아니에요. 연구 결과를 만들어 내거나 개인 건강 정보를 요구하지 않아요.

Task responses / possible explanations

1. Claim: every wearer's calmness and test scores improve after seven days. Missing: identifiable research supporting that claim. The guidance helps evaluate sources; it does not prove the product works or fails.

주장: 모든 착용자의 마음이 7일 뒤 차분해지고 시험 점수가 올라간다는 것이에요. 이를 뒷받침하는 확인 가능한 연구가 없어요. 안내는 출처 평가를 돕지만 제품의 효과 유무를 증명하지는 않아요.

2. Pause, do not post private details, and ask a trusted adult to help check. The guidance supports source checking, not a conclusion about PowerBand's effect.

잠시 멈추고 개인정보를 올리지 않으며, 믿을 만한 어른과 함께 확인해요. 안내는 출처 확인을 돕지만 PowerBand의 효과에 관한 결론을 제공하지는 않아요.

Protect and get help | student pages 6

Use when: Week 6, after confirming school roles, places and emergency procedures.

학교의 담당 역할, 장소, 긴급 대응 절차를 확인한 뒤 6주차에 사용해요.

Learning goal / connection: Immediate protection, appropriate help, privacy and follow-up; not first-aid training.

즉각적인 안전 확보, 알맞은 도움, 개인정보 보호, 후속 도움. 응급처치 훈련은 아니에요.

Look for: Prioritizes protection and adult responsibility; includes a feasible backup without confronting the account.

안전과 어른의 책임을 우선하며, 모르는 계정에 맞서지 않고 실행 가능한 대안을 세우는지 살펴봐요.

Do not request real disclosures or stage an emergency. Offer another low-detail case and allow passing on public sharing.

실제 경험을 밝히도록 요구하거나 위급 상황을 재연하지 않아요. 구체적 묘사가 적은 다른 사례를 주고 공개 나눔을 건너뛸 수 있게 해요.

For a real concern, follow school procedures privately. A learner need not collect evidence before getting protection.

실제 문제가 있다면 학교 절차에 따라 따로 대응해요. 학생이 보호받기 전에 증거를 모을 필요는 없어요.

Task responses / possible explanations

1. A sound plan stops the risky interaction, reaches a confirmed school adult/location, and names another available responsible adult if needed. Accept a brief private request without personal details.

위험한 대화를 멈추고, 확인된 장소에서 학교의 어른을 찾고, 필요하면 다른 책임 있는 어른에게 가는 계획이면 돼요. 개인 정보를 밝히지 않고 따로 짧게 도움을 요청해도 돼요.

2. Move yourself away from danger and alert the supervising adult immediately. Immediate danger needs the school emergency route or 911 now; do not delay to investigate.

자신은 위험에서 벗어나고 지도하는 어른에게 즉시 알려요. 즉각적인 위험에는 학교의 긴급 대응 절차나 911을 이용해요. 조사하느라 도움 요청을 늦추지 않아요.

Ready, stop, try again | student pages 7

Use when: Before familiar partner practice or captain rehearsal across the six weeks.

6주 동안 익숙한 짝 활동이나 주장 역할 연습 전에 사용해요.

Learning goal / connection: Safe participation, boundaries, ready/stop signals and teacher-approved adjustments.

안전한 참여, 상대의 의사 존중, 준비·멈춤 신호, 선생님이 승인한 조절.

Look for: Waits for readiness, accepts no, requests an adjustment and uses the stop/retrieval routine.

준비를 기다리고, 거절을 존중하고, 조절을 요청하며, 멈춤과 공 회수 절차를 지키는지 살펴봐요.

This is a communication companion, not new skill instruction. Teacher supervision and existing support plans apply.

이 자료는 의사소통을 돕기 위한 것이며 새 운동 기술을 가르치는 자료가 아니에요. 선생님의 지도와 기존 지원 계획을 따라요.

Written or signalled dialogue shows communication, not physical performance. Arrange appropriate purposeful movement separately; never require touch or public speech.

글이나 신호로 하는 대화는 의사소통을 보여 주며 신체 수행을 보여 주지는 않아요. 알맞은 신체 활동은 따로 마련해요. 접촉이나 공개 발표를 요구하지 않아요.

Task responses / possible explanations

1. Example: 'Okay. I will not touch your arm. Watch my movement, or I can explain.' Accept no without demanding a reason.

예: '알겠어요. 팔을 만지지 않을게요. 제 동작을 보거나 설명을 들어도 돼요.' 이유를 요구하지 않고 거절을 존중해요.

2. Stop safely and secure your ball if you have it; do not chase into another lane. Signal the teacher, request an adjustment, and wait for approved retrieval/restart.

안전하게 멈추고 자기 공이 있으면 멈춰 두어요. 다른 구역으로 공을 쫓아가지 않아요. 선생님께 알리고 조절을 요청한 뒤, 공을 가져오거나 다시 시작해도 된다는 허락을 기다려요.

Sources, reuse and font credit

The canonical new PHE and maths sequences supply the original fictional scenarios, number tasks and models. Existing bilingual speaking and foundational practice informed the support format. No student records or identifiable source documents are reproduced.
