

Keep the whole the same

Compare tenths and hundredths using equal wholes.

Each complete grid is 1 whole. Each small square is 1 hundredth. Point, speak, draw or write.

Look at the example

The first grid shows 40 hundredths: 0.40, or 4 tenths. The second shows 4 hundredths: 0.04. Forty hundredths is greater than four hundredths, so $0.4 > 0.04$.

0.4

0.04

1. Compare 0.6 and 0.60. Point to evidence in the grids. Explain your choice.

0.6

0.60

☐ <

☐ >

☐ =

2. Compare 0.08 and 0.8. Which shaded amount is greater? Show how the grids help.

0.08

0.8

☐ <

☐ >

☐ =

Words you can use

The whole is ____.

I can point to ____.

____ tenths is ____ hundredths.

Read each row from left to right. Point to matching places, then the first place that differs.

Compare 4.305 and 4.35. Write 4.35 as 4.350; its value stays the same. The ones and tenths match. The hundredths first differ: $0 < 5$. So $4.305 < 4.35$.

Number	Ones	Tenths	Hundredths	Thousandths
4.305	4	3	0	5
4.350	4	3	5	0

Number	Ones	Tenths	Hundredths	Thousandths
5.208	5	2	0	8
5.280	5	2	8	0

$$\square =$$

Number	Thousands	Hundreds	Tens	Ones
3,460	3	4	6	0
3,406	3	4	0	6

$$\square =$$

Please give me time to show you.

Show your reason with fresh numbers

Explain a decimal comparison, an equality and a whole-number comparison.

Try these on your own with your usual supports. You may point, speak, draw or write. Ask for a word to be read if needed.

Look at the example

Response model: point to matching places. Then say, ‘The ____ place decides because ____.’ If every place matches, explain why the values are equal. The numbers below are yours to decide.

1. 0.407 __ 0.47. Choose a symbol and explain the deciding place.

Number	Ones	Tenths	Hundredths	Thousandths
0.407	0	4	0	7
0.470	0	4	7	0

☐ < ☐ > ☐ =

2. 1.8 __ 1.80. Explain what the final zero changes, if anything.

Number	Ones	Tenths	Hundredths
1.8	1	8	0
1.80	1	8	0

☐ < ☐ > ☐ =

Match the two collections

Compare collections by matching or counting each dot once.

Match one left dot with one right dot. You can draw matching lines, point, or use counters. Check for any dots without a partner.

Look at the example

There are 3 dots on the left and 5 on the right. Make 3 pairs. Two right dots have no partner, so the right collection has more. The left collection has fewer.

Left

Right

1. Match or count. Which collection has more? Show how you know.

Left

Right

☐ Left

☐ Right

☐ Same amount

2. Which collection has more now? Match or count to check.

Left

Right

☐ Left

☐ Right

☐ Same amount

Words you can use

This collection has more.

These dots do not have a partner.

More, fewer or the same?

Compare new collections, including equal amounts.

Use matching or counting. Point to a choice and show your reason. Work on each new pair before someone tells you an answer.

Look at the example

The model has 2 dots on each side. Every dot has a partner and none are left unmatched. The collections have the same amount.

Left

Right

1. Which collection has more? Show your comparison.

Left

Right

☐ Left

☐ Right

☐ Same amount

2. Which collection has fewer? Point, then check.

Left

Right

☐ Left

☐ Right

☐ Same amount

3. Do these collections have different amounts or the same amount? Show how you know.

Left

Right

☐ Different amounts

☐ Same amount

Words you can use

I matched ____.

Every dot has a partner.

This side has fewer.

Groups of ten and loose ones

Connect groups of ten and single ones to a written number.

Each long rod contains 10 small units. Each loose square is 1. Count groups and loose ones.

Look at the example

The model has 2 tens and 3 ones. Two groups of ten and three loose ones make 23. This is a representation of 23, not an addition or subtraction task.

Tens

Ones

1. How many tens? How many ones? Say or write the number shown.

Tens

Ones

2. Which collection shows the greater number? Use the tens and ones to explain.

Tens

Ones

Tens

Ones

3. Fresh try: name the tens, the ones and the number. What does the empty ones space mean?

Tens

Ones

Words you can use

I see ___ tens and ___ ones.

The number is ___.

Show what changes

Represent joining and removing objects, then find the amount.

One dot is one object. Use the frame, draw, or move counters. Add dots when joining; cross out or remove dots when taking away.

Look at the example

Outlined dots are added; crossed dots are removed. First frame: start with 4 dots and add 2. There are 6: $4 + 2 = 6$. Second frame: start with 6 dots and remove 3. There are 3 left: $6 - 3 = 3$.

First

Second

Solid dots: start. Outline dots: added. Crossed dots: taken away.

1. Start with 2 dots. Add 5 more. How many altogether? Show the joining.

First

2. Start with 9 dots. Take away 4. How many remain? Show what was removed.

First

3. Fresh try: start with 3 dots and add 5. Show the change and the total.

First

4. Fresh try: start with 8 dots and take away 1. Show how many remain.

First

Words you can use

I started with ____.

I added / removed ____.

Now there are ____.
