

Leaves underfoot

NOTICE

Describe two differences between the leaves.
What can you point to?

EXPLAIN

Does this photograph prove when the leaves fell? What more would you need to know?

REVISIT

Choose one patch near school. Record its date and leaf cover, then return to the same spot.

Image description: Red, orange, yellow and pale fallen leaves lie on green grass.

Original photograph: 181020-150-1024px (43742720350).jpg | Creator: waferboard

Location: South Surrey, British Columbia, Canada | Date: October 2018

Archival reference image; not a current Surrey observation. Source date field says 1 October 2018; filename begins 181020. Day is uncertain.

License: [CC BY 2.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: [https://commons.wikimedia.org/wiki/File:181020-150-1024px_\(43742720350\).jpg](https://commons.wikimedia.org/wiki/File:181020-150-1024px_(43742720350).jpg)

A leaf worth looking at

NOTICE

Follow the leaf edge with your eyes or a description. What shapes repeat?

EXPLAIN

Which features would help you compare this leaf with another? Which details are missing?

REVISIT

Look for a fallen leaf without picking living leaves. Sketch its outline and compare with a tree guide.

Image description: A large yellow bigleaf maple leaf lies on a woodland path, showing pointed lobes and branching veins.

Original photograph: Acer macrophyllum 6.jpg | Creator: Thayne Tuason

Location: Devil's Gulch Trail, Chelan County, Washington, USA | Date: 20 October 2011

Archival reference image; not a current Surrey observation.

License: [CC BY-SA 4.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Acer_macrophyllum_6.jpg

Patterns in a cone

NOTICE

Find one repeated shape and one detail that stands out.

EXPLAIN

How could a close view help us check which kind of cone this is?

REVISIT

Observe a cone where it lies. Describe it before looking at a labelled tree guide.

Image description: A brown Douglas-fir cone hangs among green needles, with pointed bracts projecting between its scales.

Original photograph: *Pseudotsuga menziesii* cone Port Townsend.jpg | Creator: RVWithTito

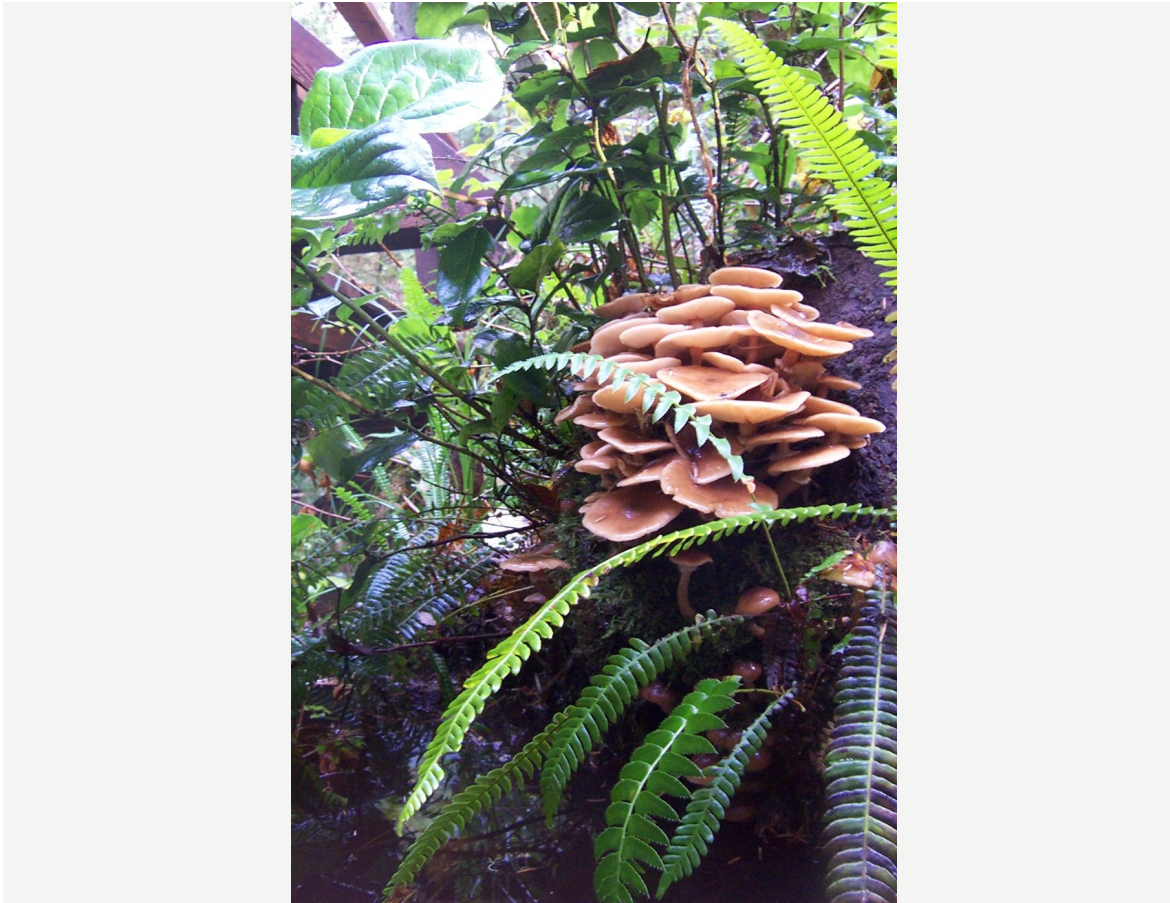

Location: Port Townsend, Washington, USA | Date: 25 October 2008

Archival reference image; not a current Surrey observation.

License: [CC BY 2.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Pseudotsuga_menziesii_cone_Port_Townsend.jpg

Life on fallen wood

NOTICE

Describe where the mushrooms are growing. Avoid guessing their names.

EXPLAIN

What questions could this image help us ask about the wood? What can it not prove?

REVISIT

From a path, compare damp and dry-looking wood. Record what is visible without touching fungi.

Image description: Several tan mushrooms grow in an overlapping cluster on dark wood, surrounded by ferns.

Original photograph: Cluster of mushrooms (62169202).jpg | Creator: Gerry Thomasen

Location: Near Long Beach, Vancouver Island, British Columbia, Canada | Date: 7 January 2001 (source metadata)

Archival reference image; not a current Surrey observation. Species is uncertain: source calls these "Honey Mushrooms?" Do not present a firm species identification.

License: [CC BY 2.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: [https://commons.wikimedia.org/wiki/File:Cluster_of_mushrooms_\(62169202\).jpg](https://commons.wikimedia.org/wiki/File:Cluster_of_mushrooms_(62169202).jpg)

A tiny landscape

NOTICE

Zoom in. Describe the shapes and the surface supporting them.

EXPLAIN

How is this surface similar to, or different from, the ground nearby?

REVISIT

Compare two small surfaces from an accessible observation point. Record where moss is visible.

Image description: A bright green carpet of moss follows the rounded surface of a fallen log.

Original photograph: Nurse log with moss.JPG | Creator: Lumpytrout

Location: Kitsap County, Washington, USA | Date: 19 March 2014

Archival reference image; not a current Surrey observation.

License: [CC BY-SA 4.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Nurse_log_with_moss.JPG

Moss or something else?

NOTICE

Describe the edge, colour and texture you can see or learn from the image description.

EXPLAIN

Compare this with the moss photograph. What evidence supports a difference?

REVISIT

Look at a tree or rock from a path. Record a shape and a question; leave it attached.

Image description: Grey-green lobes of shield lichen spread over rough bark.

Original photograph: *Parmelia sulcata* 105945729.jpg | Creator: Randal (rambryum)

Location: British Columbia, Canada; source coordinates 49.637733, -125.112754 | Date: 28 November 2020

Archival reference image; not a current Surrey observation.

License: [CC0 1.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Parmelia_sulcata_105945729.jpg

Weather over the coast

NOTICE

Describe the sky, distant land and water.
What is visible and what is hard to see?

EXPLAIN

What could happen to rain on a roof, soil or pavement? Which idea could we check?

REVISIT

After rain, observe from a safe dry place.
Sketch where water collects and where it may move next.

Image description: Low clouds hang over a waterfront city and an evergreen-covered slope at Stanley Park.

Original photograph: Stanley Park 1999 Rain.jpg | Creator: Thorfinn Stainforth

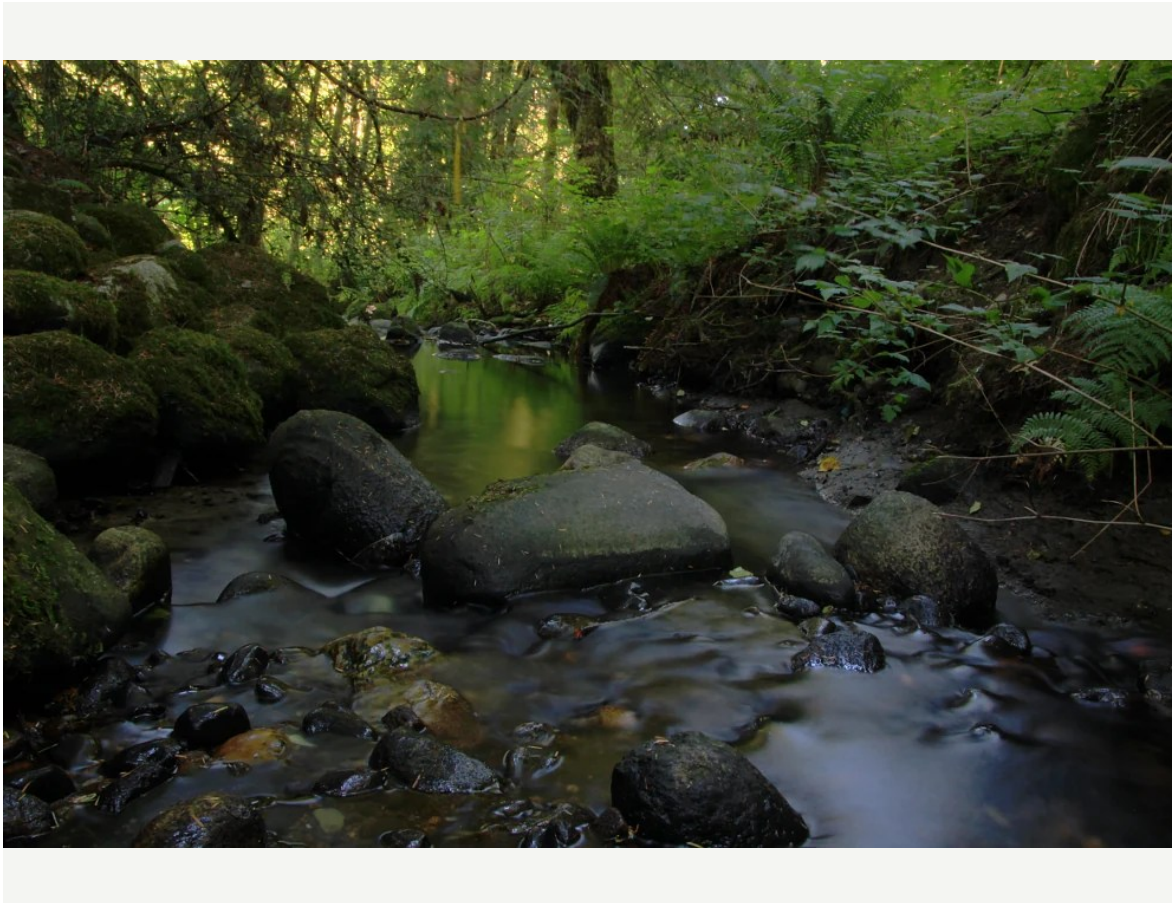

Location: Stanley Park, Vancouver, British Columbia, Canada | Date: June 1999

Archival reference image; not a current Surrey observation.

License: [CC BY-SA 3.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Stanley_Park_1999_Rain.jpg

A stream close to home

NOTICE

Describe two features beside or within the stream.

EXPLAIN

How might water arriving from nearby streets affect this place? What evidence would we need?

REVISIT

From school grounds, map a possible route for rainwater. Mark guesses with a question mark.

Image description: Shallow water flows between rounded rocks beneath dense forest vegetation in Tynehead Regional Park.

Original photograph: Serpentine river headwaters (14709820528).png | Creator: waferboard

Location: Tynehead Regional Park, Surrey, British Columbia, Canada | Date: August 2014

Archival reference image; not a current Surrey observation. Source date field says 1 August 2014; image identifier is 140810-13. Day is uncertain.

License: [CC BY 2.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: [https://commons.wikimedia.org/wiki/File:Serpentine_river_headwaters_\(14709820528\).png](https://commons.wikimedia.org/wiki/File:Serpentine_river_headwaters_(14709820528).png)

Salmon: look for evidence

NOTICE

What can you observe about the fish and its surroundings?

EXPLAIN

Can one photograph prove that a fish is spawning? What evidence or source would help?

REVISIT

Compare this dated salmon image with a current official Surrey viewing update or a supervised observation.

Image description: A group of red sockeye salmon is visible in shallow river water.

Original photograph: SockeyeSpawn inAdams.JPG | Creator: Theinterior

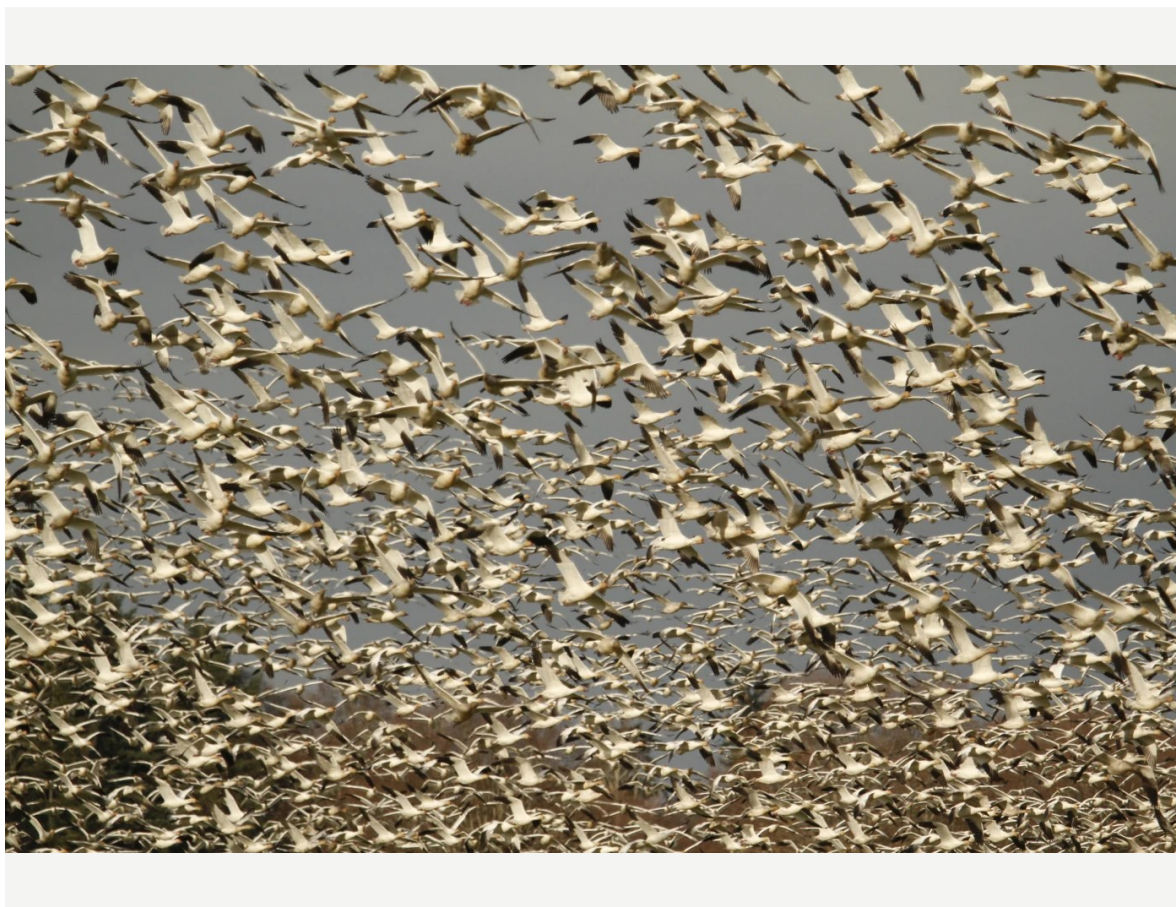

Location: Adams River, British Columbia, Canada | Date: 8 October 2010 (source description)

Archival reference image; not a current Surrey observation. Source description dates the photograph to 8 October 2010; embedded camera date is 10 October 2006. Exact capture date is uncertain. Not evidence of salmon present in Surrey today.

License: [CC BY 3.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:SockeyeSpawn_inAdams.JPG

A gathering of birds

NOTICE

Describe the birds and their spacing. Which actions can you actually see?

EXPLAIN

What would repeated observations tell us that this single photograph cannot?

REVISIT

Watch birds from a distance near school. Record number, place and visible behaviour without feeding them.

Image description: A dense flock of white and dark-winged snow geese rises into the air.

Original photograph: Reifel Bird Sanctuary Snow Geese.jpg | Creator: ShayneKayePhoto

Location: George C. Reifel Migratory Bird Sanctuary, Westham Island, Delta, British Columbia, Canada | Date: 4 December 2015

Archival reference image; not a current Surrey observation.

License: [CC BY-SA 4.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Reifel_Bird_Sanctuary_Snow_Geese.jpg

A web holds clues

NOTICE

Trace or describe a repeating pattern. Where are the droplets?

EXPLAIN

Could the photograph alone tell us how the droplets formed? Explain what is uncertain.

REVISIT

Look for a web without touching it. Compare its pattern with the photograph or a verbal description.

Image description: A large dew-covered spiderweb stretches between a tree trunk and surrounding vegetation.

Original photograph: Dew-on-Spiderweb.jpg | Creator: GabrielleMerk

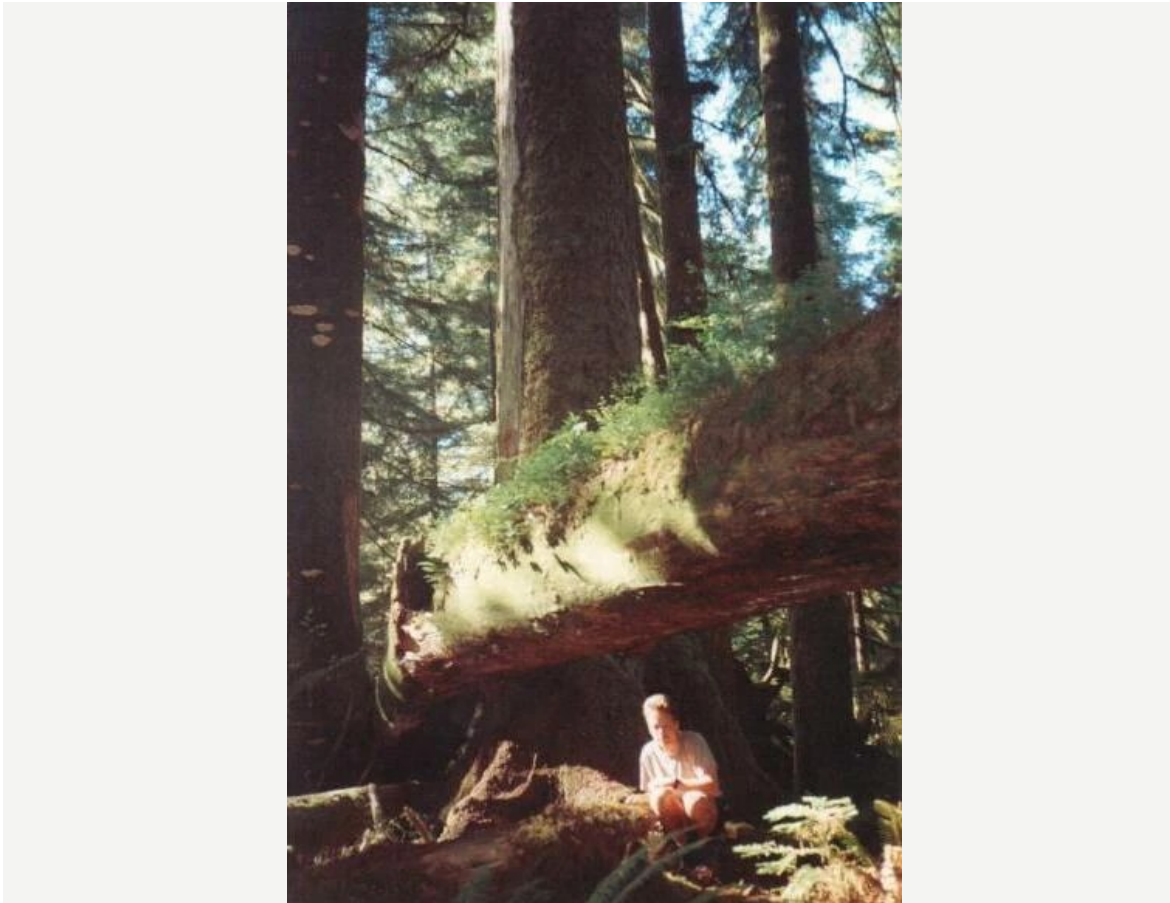

Location: UNKNOWN - location not documented on source page | Date: 18 October 2014

Archival reference image; not a current Surrey observation. Source describes dew drops from early morning fog. Location is unknown; use as a general comparison image.

License: [CC BY-SA 4.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: <https://commons.wikimedia.org/wiki/File:Dew-on-Spiderweb.jpg>

A fallen tree, a living place

NOTICE

Find evidence of plants growing on or near the fallen wood.

EXPLAIN

Why might this fallen tree matter to other living things? Separate an idea from visible evidence.

REVISIT

Observe fallen wood from a path. Draw a relationship and label it “observed” or “possible”.

Image description: A huge moss-covered nurse log spans a forest, with trees above and a person below for scale.

Original photograph: Nurse Log in Carmanah Park.jpg | Creator: Ademoor

Location: Carmanah Walbran Provincial Park, British Columbia, Canada | Date: November 1993

Archival reference image; not a current Surrey observation. Commons version was cropped 1% horizontally by Sebastian Wallroth in December 2023 to remove a border; this bank preserves that published frame.

License: [CC BY 2.5](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Nurse_Log_in_Carmanah_Park.jpg

Small life among leaves

NOTICE

Describe the animal and one feature of its surroundings.

EXPLAIN

What might this place provide? Which part is visible, and which part is an inference?

REVISIT

Study leaf litter in place from a safe observation point. Record one detail without collecting animals.

Image description: A Pacific sideband snail rests among fallen leaves and twigs, with a finger nearby for scale.

Original photograph: Pacific sideband Snail in Leaf litter - Flickr - brewbooks.jpg | Creator: brewbooks

Location: Shoreview Park, Shoreline, Washington, USA | Date: 20 February 2015

Archival reference image; not a current Surrey observation.

License: [CC BY-SA 2.0](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Pacific_sideband_Snail_in_Leaf_litter_-_Flickr_-_brewbooks.jpg

Shapes that repeat

NOTICE

Describe a repeating shape along the frond.

EXPLAIN

Which comparisons would help distinguish this fern from a tree branch or moss?

REVISIT

Compare two plants from the same observation point. Use shapes and arrangement rather than size alone.

Image description: Green fern fronds spread from a shaded rocky shelf in a forest.

Original photograph: Ferns Capilano Park Vancouver British Columbia Canada 01.jpg | Creator: RestfulC401 / WinterforceMedia

Location: Capilano River Regional Park, North Vancouver, British Columbia, Canada | Date: 11 April 2009

Archival reference image; not a current Surrey observation. The source description says ferns and Commons categorizes the image as *Polystichum munitum*; use cautious caption "ferns" if exact species is not needed.

License: [Public domain \(author release\)](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: https://commons.wikimedia.org/wiki/File:Ferns_Capilano_Park_Vancouver_British_Columbia_Canada_01.jpg

Many kinds of green

NOTICE

Find two contrasting shapes or colours in the forest view.

EXPLAIN

Which trees might change differently through the year? How could we investigate?

REVISIT

Choose one repeatable viewpoint near school. Sketch or photograph it with school equipment on two dates.

Image description: Broad maple leaves and tall conifer trees share a green forest canopy.

Original photograph: CapilanoRiverRegPark-trees.jpg | Creator: Arnold C

Location: Capilano River Regional Park, North Vancouver District, British Columbia, Canada | Date: 20 May 2006

Archival reference image; not a current Surrey observation. Source identifies *Tsuga heterophylla* and *Acer macrophyllum*. Copyright holder permits any use with proper attribution, including redistribution, derivative and commercial use. This is an evergreen/deciduous comparison, photographed in spring.

License: [Attribution required \(copyright-holder permission\)](#) | Resized and converted to WebP; full frame preserved. PDF: resized, JPEG-encoded, full frame retained. Original license retained.

Source: <https://commons.wikimedia.org/wiki/File:CapilanoRiverRegPark-trees.jpg>
