

One Supported Claim

Two Evidence Traps

Purpose

Students identify the only claim fully supported by a short source, then make a separate choice for the strongest evidence. The two traps are plausible but change the population, status, certainty, or cause.

- 1 Display or hand out one source card and its A/B/C claim card.
- 2 Groups choose the one fully supported claim and show A, B, or C.
- 3 Groups make a second choice for the strongest evidence and show 1, 2, or 3.
- 4 Call on groups to explain how the two evidence traps outrun the source.
- 5 Reveal both answers. Students record the claim, evidence, trap types, and verification move.

Important language

A trap is not necessarily a deliberate lie. It is a claim this source cannot carry because it is too broad, changes a proposal into a decision, or invents a cause. Ask: What does this source actually prove?

SOURCE CARD | GRADE 6 LUNCHTIME SURVEY

On September 18, 82 of the 120 Grade 6 students who answered our lunchtime survey chose 'more outdoor seating.' The other 38 chose 'more indoor seating.'

Fictional classroom practice source

DECISION 1 | CHOOSE THE ONE FULLY SUPPORTED CLAIM: A, B, OR C**A**

Exactly 82% of every Grade 6 student wants more outdoor seating.

B

Among the students who answered, more chose outdoor seating than indoor seating.

C

The survey proves outdoor seating will make all students happier.

DECISION 2 | CHOOSE THE STRONGEST EVIDENCE: 1, 2, OR 3

1. 82 of 120 respondents chose outdoor; 38 chose indoor.

2. The survey happened at lunchtime.

3. The survey was completed on September 18.

Explain before revealing: Why do the two traps go beyond this source?

SOURCE CARD | FICTIONAL CITY PLANNING NOTICE

Concept map for public feedback: a protected bike lane is proposed for 84 Avenue. Council has not made a final decision. The comment period closes October 16.

Fictional classroom practice source

DECISION 1 | CHOOSE THE ONE FULLY SUPPORTED CLAIM: A, B, OR C**A**

The bike lane will be built on October 16.

B

Council has approved the protected bike lane.

C

The public is being asked to comment on a proposal before a final decision.

DECISION 2 | CHOOSE THE STRONGEST EVIDENCE: 1, 2, OR 3

1. The map includes 84 Avenue.

2. 'Proposed,' 'public feedback,' and 'has not made a final decision.'

3. The comment period closes October 16.

Explain before revealing: Why do the two traps go beyond this source?

SOURCE CARD | ONE-DAY SCHOOLYARD MEASUREMENT

At 1:00 p.m., one group used the same handheld thermometer: sunlit asphalt 42 C; sunlit grass 31 C; shaded asphalt 29 C. Measurements were taken on one day.

Fictional classroom practice source

DECISION 1 | CHOOSE THE ONE FULLY SUPPORTED CLAIM: A, B, OR C**A**

All asphalt in Fleetwood is always 42 C.

B

In this group's measurements, shaded asphalt was cooler than sunlit asphalt.

C

Shade causes exactly a 13 C drop on every surface.

DECISION 2 | CHOOSE THE STRONGEST EVIDENCE: 1, 2, OR 3

1. The same thermometer was used.

2. The measurements were taken at 1:00 p.m.

3. Shaded asphalt was 29 C and sunlit asphalt was 42 C.

Explain before revealing: Why do the two traps go beyond this source?

One Supported Claim: Evidence Record

Name(s): _____

ROUND 1

Supported claim: A B C Strongest evidence: 1 2 3

How the evidence directly supports the claim:

One trap and how it outruns the source: _____

ROUND 2

Supported claim: A B C Strongest evidence: 1 2 3

How the evidence directly supports the claim:

One trap and how it outruns the source: _____

ROUND 3

Supported claim: A B C Strongest evidence: 1 2 3

How the evidence directly supports the claim:

One trap and how it outruns the source: _____

Teacher Key and Debrief

Round 1: B + 1

B stays inside the surveyed group. A changes 82 students into 82% and expands respondents to everyone. C invents an outcome the survey never measured.

Verification move: Check the population.

Round 2: C + 2

C matches the notice's status. A mistakes a feedback deadline for construction. B changes a proposal into an approved decision.

Verification move: Check the status and date.

Round 3: B + 3

B reports this group's observation. A generalizes one place and time to all Fleetwood forever. C turns one comparison into a universal causal rule.

Verification move: Separate observation from cause.

Debrief questions

- Which trap was most tempting, and what word or number made it tempting?
- How can a claim use accurate details but still outrun its source?
- What is the difference between an observation, an inference, and a cause?
- Which verification move would you use first on a real post or notice?
